Under "Training and Events"

As of the third quarter of 2016, Facebook had 1.71 billion monthly active users. Furthermore, as of that quarter the social network had 1.57 billion mobile application users. The platform is also the most popular social network worldwide. Yet, it is the hardest social networking site to gather accurate real time data. Making matters worse, Facebook has begun to shut down API's to companies offering Facebook analytical data to police.

This is the only police course offered in the United States that will provide step by step instructions on creating over 50 complex and detailed searches within Facebook that produce actionable results!

This course will also go into the details of the Facebook ecosystem and the data Facebook collects along with their data collection policies. Common pitfalls and mistakes police make when searching Facebook will be discussed as well as tips & tricks for constructing and securing Facebook accounts.

This one day course is a must for investigators and analysts and will only be offered once in the area in 2017. Attendees are encouraged to bring case examples and their laptops to use in this class.
